The project proposes to contemplate a number of education, outreach and communication activities which are directed to the divulgation of the project's research results and foresees, among other activities:

1) Creation and periodic updating of a web-site with disclosure material for educators, students and the general public;

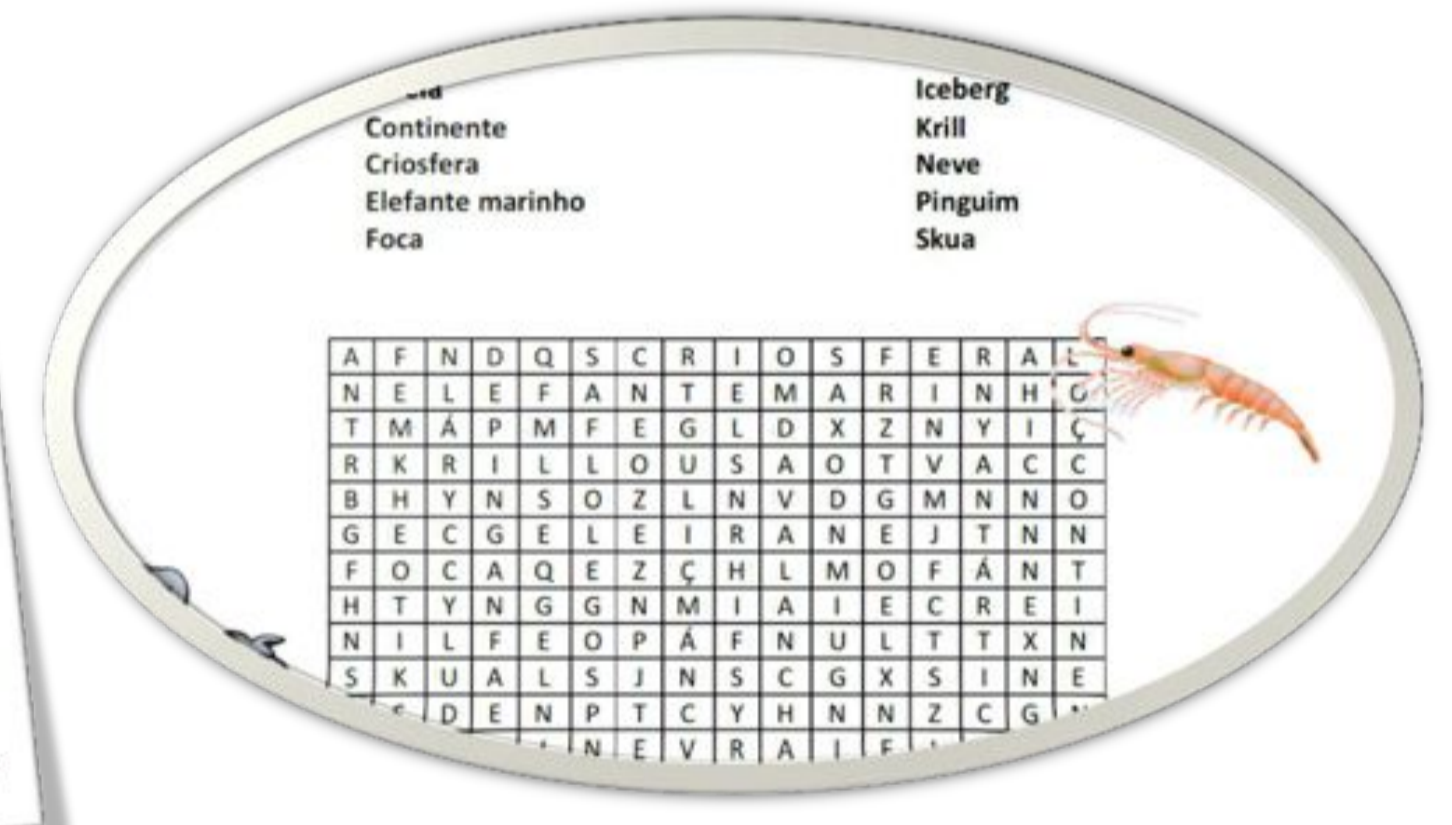

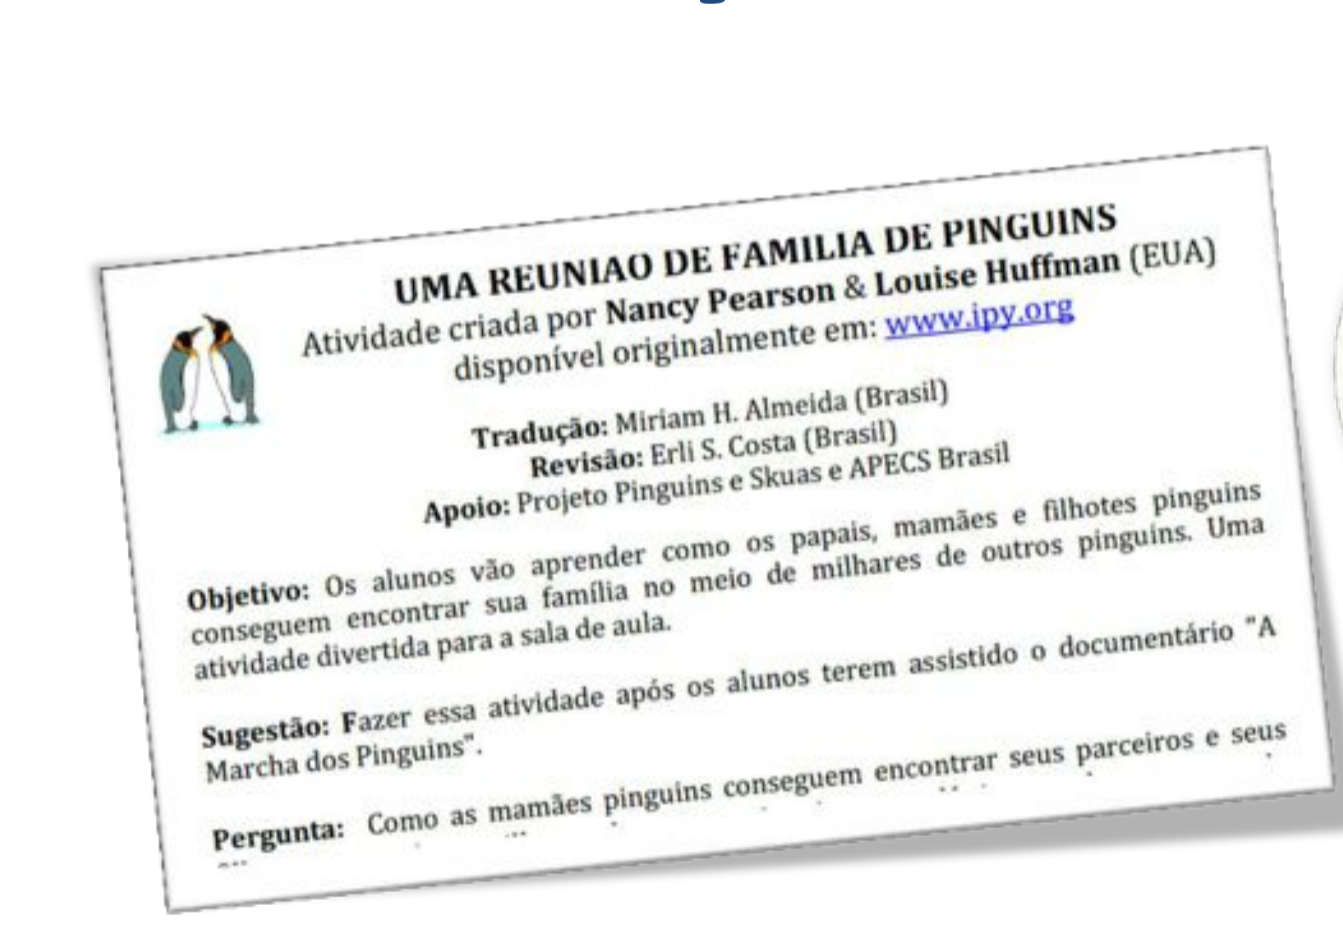

2) Creation of a documentary video of the research activities in the Antarctica and the laboratory analyses;

3) Designing and divulgation of educational material made available at no charge for schools all over the country;

4) Workshop, lectures, disclosure texts, interviews, reports, and other activities - direct contact with the public.

Through these activities this project aims to accomplish a wide disclosure of its scientific activities and to stimulate the participation of students in all levels of education, educators and the whole community, in a way that will effectively contribute with relevant educational aspects, bringing up important matters for the Brazilian society and promoting a wide debate about them.
